Compare and contrast the similarities and differences between members of the Kingdom Protista with the other kingdoms in the Domain Eukarya. Give examples to illustrate your comparison. (12 marks)

##

Content	Description	Mark
General similarity	• All protists, fungi, plants and animals have a true nucleus and membrane-bound organelles. (1)	
Comparison with Plantae*	• Some protists are autotrophs like plants. (1) • For example, algae contain chlorophyll and can carry out photosynthesis and produce their own food. (1) • Some protists have cell walls made up of cellulose like plants. (1) • Most protists are unicellular while plants are multicellular. (1) • Protists have no cellular differentiation while plant cells differentiate into different tissues and organs. (1)	
Comparison with Fungi*	• Some protists are saprophytes like most fungi. (1) • For example, slime moulds feed on dead organisms or non-living organic matter. (1) • Most protists are unicellular while most fungi (except yeast) are multicellular. (1) • Some protists have cell walls but their cell walls are not made up of chitin as in fungi. (1)	
Comparison with Animalia*	• Some protists can move by themselves like animals do. (1) • For example, *Paramecium* moves by cilia / *Amoeba* moves by amoeboid movement. (1) • Unlike animals, *Paramecium* / *Amoeba* is unicellular, but animals are multicellular. (1) • Protists have no cellular differentiation while animals have organ systems. (1)	(Max. 9)

* Points from all three kingdoms must be mentioned to score full marks.

Communication (Max. 3)
